

CHAMBER TYPE

We have various models of chamber machines designed for customers with different production needs to reach an optimum ratio price/performance and reliability in time. Different production requirements are satisfied by the four distinct chamber machines models.

Standard shrinking magnet assembled on machine, washable stainless steel lower chamber to grant better hygiene in foodstuff packing.

six working programs available directly by the electronic control panel that drive all machine functions (and automatically adjust sealing time, avoiding fumes caused by sealing blade overheating), sealing by adjustable impulse blade, security thermostat with warning signal to find out troubleshooting, sliding trolley and adjustable working surface, film micro puncher, motorized winder, are the features of FM range. Two working possibilities (sealing only or sealing + shrinking).
